

WANT SOLAR?

NEW RICHMOND UTILITIES CAN HELP. WE RECOMMEND THESE BEST PRACTICES.

Reach out to us. We can help you think through important questions like: Should my solar array be ground or roof mounted? Would my solar project receive any shading? What types of incentives am I eligible for?

Contact local solar installation companies. Utility staff can help you find local contractors and review proposals.

Select your contractor. We recommend getting at least three quotes to compare total costs and payback periods of different systems.

Complete required interconnection documents. The Distributed Generation Application and Solar Photovoltaic Supplemental Application Form can be found at nrutilities.com.

Obtain local permits. All solar arrays require a building permit, and some may require Plan Commission approval. Commercial roof top systems require a structural analysis.

Installation and inspection. After installation of your solar equipment, a final inspection is required by our local building inspector and New Richmond Utilities.

CHOOSE
renewable

Did you know that it only takes three blocks of renewable energy to power the average home for a month? Our Choose Renewable program is only \$2 per block per month and increases the amount of electricity generated from clean energy sources, helping lower costs over the long term.
